Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al.

Kobayashi et al disclose an image forming apparatus comprising a photosensitive unit 1 (Fig. 9) for forming an image, an endless intermediate belt 20 trained under tension around rollers 64, 65, 66 where the belt is rotated over the rollers and transfer the image from the unit to a receiving material P, wherein the belt comprising a fabric of threads as a support and the treads being positioned so that when the intermediate belt rotates, a deviation of the belt axially is substantially independent of the tension (Fig. 3-5, Col. 5, line 17 thru Col. 6, line 62).

Kobayashi et al further disclose the fabric comprising one of more thread extend substantially in the peripheral direction of the belt (Fig. 1, 2, 5, Col. 5, lines 55-65), wherein the threads extend over a length L equal to the periphery of the belt in the axial direction over a distance D equal to three percent of the length L (Col. 5, line 65 thru Col. 6, line 13), a method for making an intermediate belt including step for weaving

threads to form a fabric belt and treating the threads to maintain the position of the threads (i.e. coating layer 101, Col. 6, line 16) and applying a top layer to the fabric belt; the top layer is a rubber and the thread are made of a plastic.
